

DG Interns Hub

Web Development Internship

Week 1 - HTML & Web Fundamentals

Ishanya Jha

Intern ID: DG/AUGUST/WEB/037

Role: Web Development Intern | MCA Student

Date: August 2026

Week 1 - HTML & Web Fundamentals

Week 1 focused on understanding the fundamentals of HTML, webpage structure, semantic elements, forms, tables, links, images, basic CSS styling, JavaScript practice, and GitHub workflow.

HTML Fundamentals

- Document structure
- Headings and paragraphs •
- Lists
- Links
- Images
- Attributes

Semantic HTML

- header
- nav
- main
- section
- article
- footer

Forms & Tables

- Tables
- Input fields
- Radio buttons
- Checkboxes
- Select elements
- Textarea

Development Workflow

- Visual Studio Code
- Google Chrome
- Git
- GitHub

HTML & Web Concepts Learned

- HTML document structure
- Semantic HTML
- Headings and paragraphs
- Ordered and unordered lists
- Links and internal navigation
- Images and alt attributes
- HTML attributes
- Tables
- Forms and input types
- Classes and IDs
- Basic CSS integration
- Browser testing
- Basic Git and GitHub workflow

Practical Learning

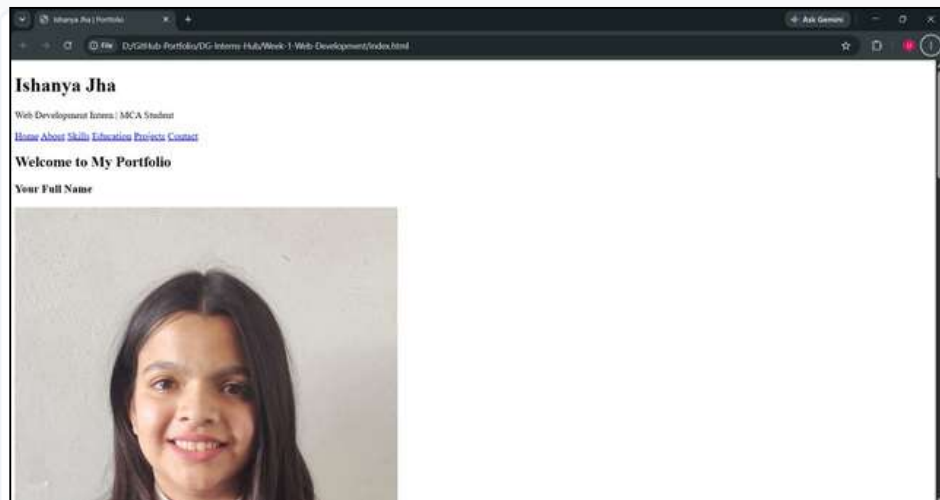

Instead of only studying HTML syntax, I applied the concepts by building and testing actual webpages and small projects.

Personal Portfolio Website

Created a multi-section personal portfolio website as the main Week 1 HTML project.

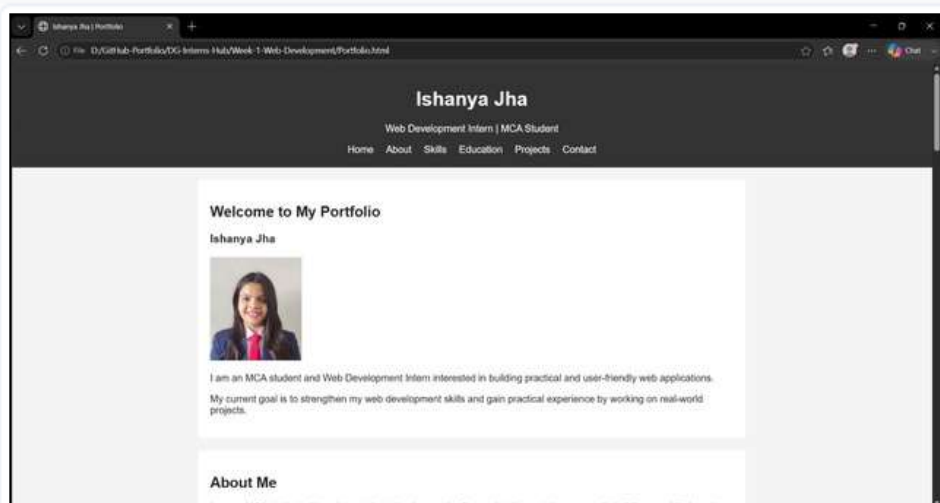

Website Sections

- Home
- About Me
- Skills
- Education
- Projects
- Contact
- Footer

Portfolio - HTML Version

Portfolio webpage before applying external CSS styling.

Portfolio - Styled Version

Portfolio webpage after applying basic CSS styling.

Implementation

n

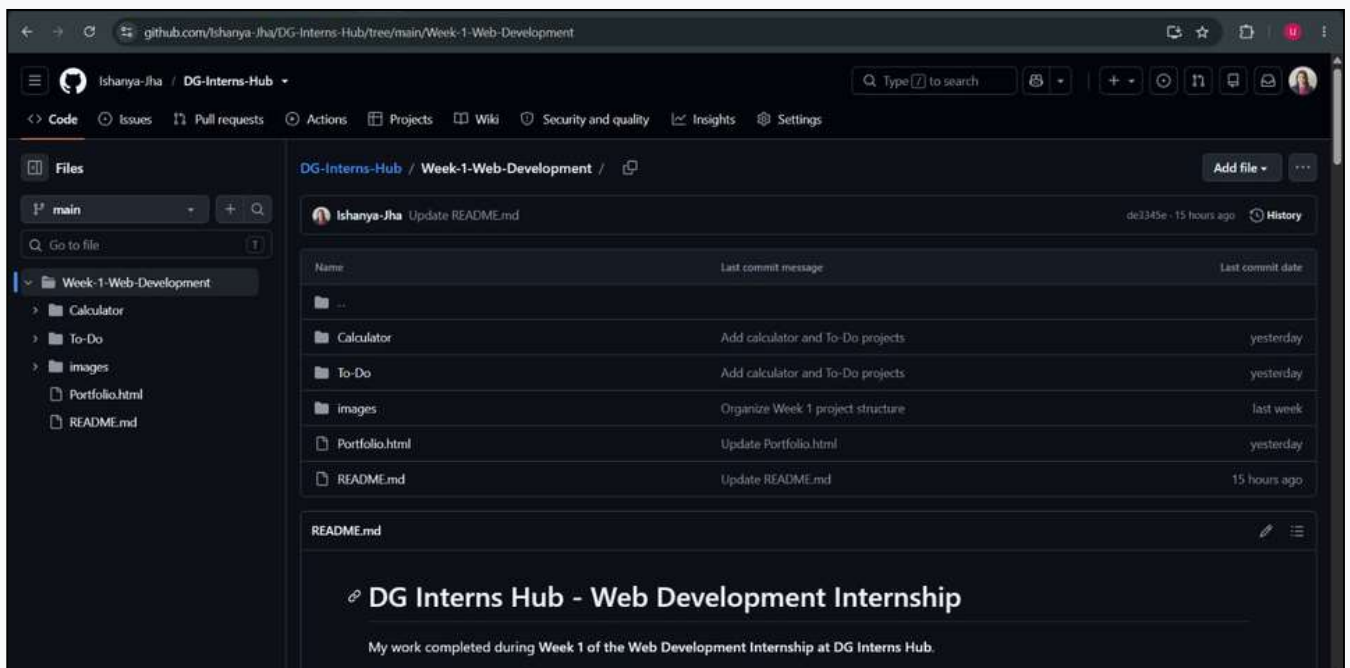

- Semantic HTML structure
- Internal navigation using id and href
- Profile image with alt text
- External links
- Education table
- Project articles
- Contact form
- Basic external CSS

Portfolio project source code and file organization in Visual Studio Code.

- ## Implementation
- Semantic HTML elements
 - Internal navigation
 - HTML attributes
 - Project cards using article
 - Education table
 - Contact form
 - External CSS stylesheet
 - Basic layout, borders, spacing and alignment

GitHub Repository & Version Control

GitHub Repository

DG Interns Hub Week 1 repository containing the portfolio and learning projects.

Repository: <https://github.com/Ishanya-Jha/DG-Interns-Hub>

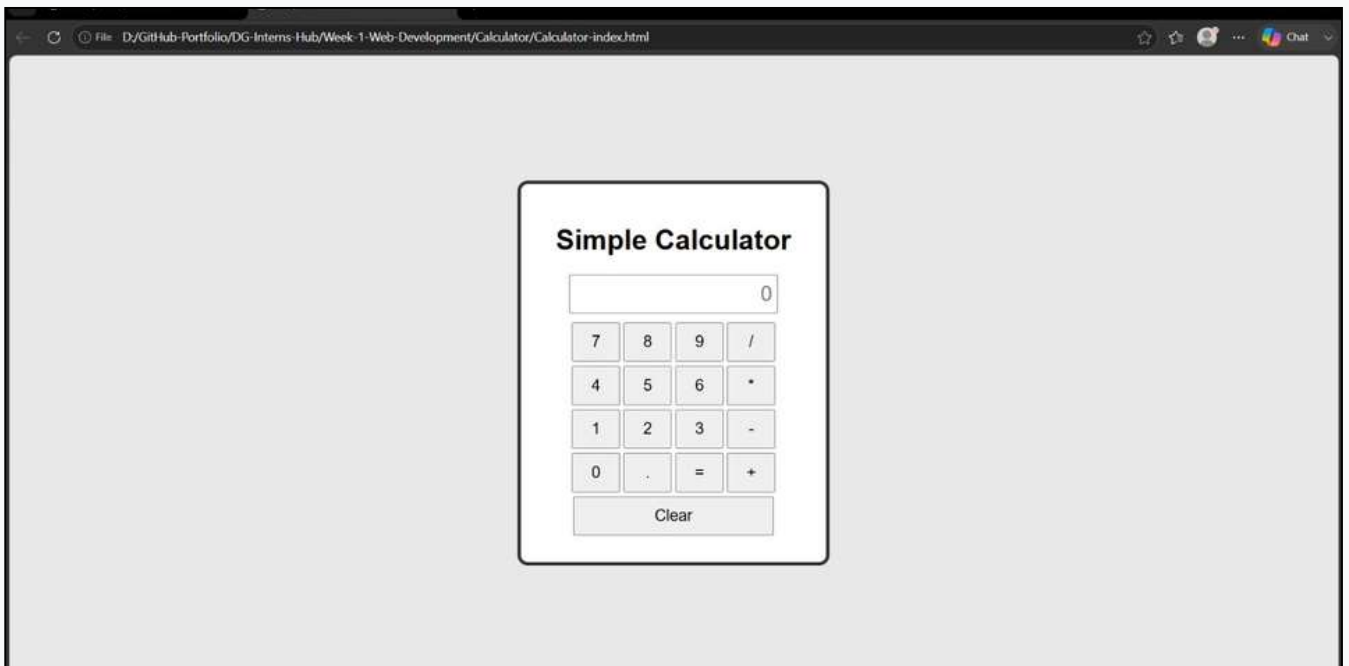

Repository Structure

```
Week-1-Web-Development/  
├── README.md  
├── Portfolio.html  
├── portfolio.css  
├── images/  
├── Calculator/  
└── To-Do/
```

GitHub Practice

- Repository organization
- Git status
- Adding files
- Commits
- Push and pull workflow
- README documentation
- Project organization

Calculator - JavaScript Learning Project

Calculator Demo

Calculator project tested in the browser.

Technologies

HTML | CSS | JavaScript

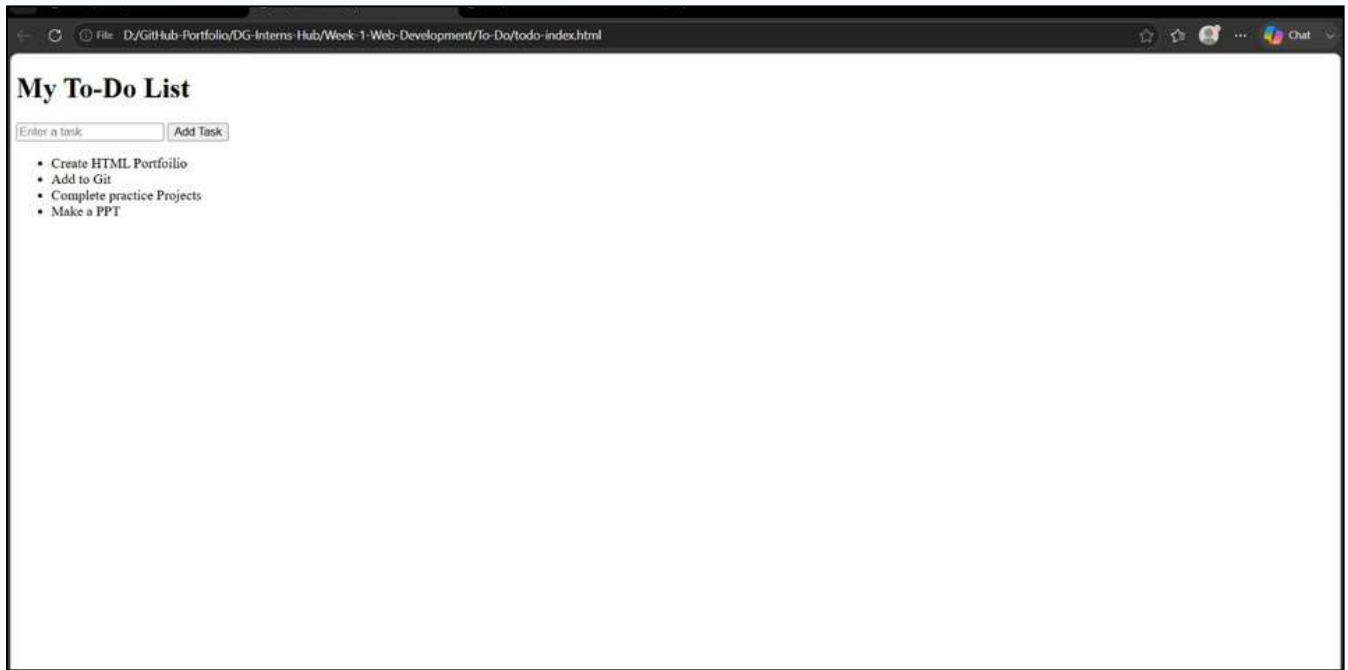

Learning Focus

- JavaScript fundamentals
- DOM interaction
- Event handling
- User input
- Basic calculation logic

Features

- Number buttons
- Addition
- Subtraction
- Multiplication
- Division
- Decimal input
- Clear function
- Calculation display

To-Do Application - JavaScript Learning Project

To-Do App Demo

To-Do application tested in the browser.

Technologies

HTML | CSS | JavaScript

Learning Focus

- User input
- Dynamic task handling
- DOM manipulation
- Event handling
- Basic task management

Project Purpose

Created to practice JavaScript interaction with HTML elements and understand how user actions can dynamically update a webpage.

Existing Projects & Technical Background

PROJECT 1: Furnisher's - Furniture Shop Management System

Technologies: VB.NET | MS Access | OLEDB | Windows Forms

Developed a desktop application to streamline inventory, billing, customer and order management. Implemented user authentication and integrated an MS Access database using OLEDB.

GitHub: <https://github.com/Ishanya-Jha/BCA-Final-Year-Project>

PROJECT 2: Programming Portfolio

Technologies: C++ | Python | Java | Git | GitHub

Built a structured GitHub repository to showcase programming projects and coding solutions. Practiced algorithmic and object-oriented programming through HackerRank and LeetCode.

GitHub: <https://github.com/Ishanya-Jha/Programming-Portfolio>

Week 1 Development

These existing projects provide additional evidence of my programming and software-development practice, while the portfolio, Calculator and To-Do App represent my current web-development learning.

Learning Outcomes & Next Steps

Learning Outcomes:

- Understood HTML document structure
- Practiced semantic HTML
- Created tables and forms
- Used HTML attributes
- Created internal and external links
- Added images with alt attributes
- Connected HTML with CSS
- Practiced JavaScript through small project
- Tested projects in the browser
- Practiced Git and GitHub workflow

Week 2 Goals:

- Strengthen CSS fundamentals
- Improve visual design
- Learn CSS Grid
- Build responsive layouts
- Improve UI design
- Continue JavaScript practice

"Week 1 helped me move from learning individual HTML elements to building and documenting complete web projects."
